PROFESSIONAL SUMMARY

Motivated Information Technology graduate with proven experience in Python, Machine Learning, Data Analytics, and Full-Stack Web Development. Completed 5 industry internships spanning AI/ML model development, Python programming, enterprise .NET/Angular software, and government web portal delivery. Built production-grade ML applications including a CNN-based plant disease classifier trained on 87,000+ images across 38 disease categories, a real-time AI posture correction system using pose estimation, and a full-stack ERP procurement platform. Strong in translating complex data problems into deployable solutions. Actively seeking roles in Data Analytics, Python Development, or AI/ML Engineering.

TECHNICAL SKILLS

Languages	Python, JavaScript, C#, SQL, HTML, CSS
ML / AI	TensorFlow, Scikit-learn, CNN, Computer Vision, NLP, MediaPipe, Pose Estimation
Frameworks	Flask, Streamlit, .NET, Angular, FastAPI, React.js, Vite
Data Science	Pandas, NumPy, Matplotlib, PIL, Data Analysis, Data Visualization
Databases	MySQL, PostgreSQL, SQL Server, SQLAlchemy ORM
Tools & DevOps	Git, GitHub, VS Code, REST APIs, JWT Authentication, Google Translate API

WORK EXPERIENCE

Machine Learning Intern | [Cognifyz Technologies](#) May 2025 – Jun 2025

- Designed, trained, and evaluated multiple ML classification models as part of structured data-intelligence internship tasks, applying Python and Scikit-learn throughout the development lifecycle.
- Performed feature engineering, model selection, hyperparameter tuning, and performance benchmarking to optimize prediction accuracy across assigned datasets.
- Demonstrated strong analytical thinking and attention to detail; completed all internship milestones on schedule. [ID: CTI/A1/C150853]

.NET & Angular Developer Intern | [TatvaSoft, Ahmedabad](#) May – Jun 2025

- Developed real-world software modules using .NET (C#) and Angular within a professional enterprise outsourcing environment serving global clients.
- Implemented full-stack features integrating RESTful APIs, database layers, and responsive Angular UI components following software engineering best practices.
- Gained exposure to enterprise-grade web application architecture, SDLC workflows, and cross-functional team collaboration.

Web Development Intern — UGVCL Consumer Portal | [Uttar Gujarat Vij Company Ltd.](#) Jul 2025

- Designed and delivered a government-grade Consumer Portal for UGVCL, a major Gujarat state utility company, using modern web technologies and relational database tools.
- Managed end-to-end project delivery from requirements gathering to deployment, completing to full client satisfaction as part of B.E. final-year project requirements.

AI / ML Intern | [QSkill \(Squarcell Resource India Pvt. Ltd.\)](#) Jan 2026 – Feb 2026

- Implemented an Iris Flower Classification model using K-Nearest Neighbors and Logistic Regression on the UCI Iris dataset, achieving multi-class species prediction with evaluation via confusion matrix and accuracy metrics.

- Built a Spam Mail Detector applying full NLP pipeline: text lowercasing, stopword removal, tokenization, and TF-IDF vectorization, then trained a Naive Bayes classifier achieving strong precision and F1 score on the SMS Spam Collection dataset.
- Explored data distributions with scatter plots and histograms; applied train/test splitting and model evaluation best practices across all assignments. [ID: qsai2026011221]

PROJECTS

VendorBridge — ERP Procurement Management Platform

2026

Odoo × KSV Hackathon Submission | Tech: React.js, Vite, FastAPI, Python, PostgreSQL, SQLAlchemy, JWT

- Architected a full-stack ERP vendor management system implementing the complete procurement lifecycle: RFQ creation → automated vendor bidding → quotation comparison → manager approval → Purchase Order → GST Invoice → payment.
- Implemented multi-role RBAC (Admin, Manager, Procurement Officer, Vendor) with JWT-secured FastAPI endpoints and PostgreSQL-backed SQLAlchemy models.
- Built React.js SPA with React Context state management, localStorage persistence, automated quotation simulation with lowest-bid highlighting, and activity audit logging.
- Designed 18% GST invoice computation, PO confirmation flow, and real-time status transitions across the full document lifecycle.

FloraAid — AI Plant Disease Detection Web App

2025

Tech: Python, TensorFlow, Streamlit, GoogleTrans, PIL

- Trained a Convolutional Neural Network (CNN) on 87,000+ labeled leaf images across 38 plant disease categories, achieving robust multi-class classification for agricultural use.
- Built a full-stack web application enabling real-time image upload, instant disease detection, symptom display, and evidence-based treatment recommendations.
- Integrated Google Translate API to deliver multilingual support in Gujarati, Hindi, and English, expanding accessibility for rural farmers.

Personalized Medical Recommendation System

2024 – 2025

Tech: Python, Flask, Scikit-learn, HTML/CSS

- Built an ML-powered Flask web application that analyzes user-reported symptoms and predicts potential diseases using trained classification models.
- Generated personalized recommendations including top-5 medicines and tailored workout routines per diagnosis, delivered via a clean responsive web UI.

AI Posture Correction & Rep Counter

2025

Tech: Python, Streamlit, MediaPipe, pytsx3

- Developed a real-time AI-powered fitness platform using MediaPipe pose estimation to detect and correct body posture and count exercise repetitions with frame-level accuracy.
- Delivered immediate visual overlays and voice feedback (pytsx3) for fitness training and physical rehabilitation use cases.

AayuUnify — Premium Ayurvedic D2C Storefront

2026

Tech: Next.js 14, TypeScript, Firebase Auth/Firestore, Tailwind CSS, Razorpay, Vercel | [GitHub](#) | [Live Demo](#) (pwd: raj)

- Built a full-stack premium Ayurvedic D2C e-commerce storefront using Next.js 14 App Router with TypeScript, Firebase Authentication/Firestore for real-time backend services, and Tailwind CSS for a polished branded UI.
- Developed a merchant admin console with product catalog management (seed, edit, remove SKUs), real-time Firestore order tracking, and role-based access control via environment-configured admin email gating.
- Integrated Razorpay payment gateway scaffolding with server-side order creation and signature verification, WhatsApp checkout fallback, and an offline seed catalog enabling frictionless demo/prototyping without live Firebase credentials.

EDUCATION

- CGPA: 8.07 | Final Semester SPI: 8.67
- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Database Systems, Computer Vision, Web Technologies

CERTIFICATIONS & TRAINING

- **Data Analytics Job Simulation** — Deloitte (via Forage) | May 2026
Completed applied tasks in Data Analysis and Forensic Technology in a simulated Deloitte consulting environment.
- **Python for Data Science — Elite Certificate** — NPTEL / IIT Madras | Jul – Aug 2024
Score: 75% | Assignments: 24.17/25 | Proctored Exam: 50.5/75 — ranked among top performers from 11,133 certified candidates.
- **Linear Algebra for Machine Learning (STTP)** — LDRP-ITR & Gujarat University | Dec 2025
Completed a National Short-Term Training Program with lectures by eminent academic experts.
- **AI Tools & ChatGPT Workshop** — be10x | May 2025
Skills: AI-powered presentations, data analysis with AI tools, AI-assisted coding and debugging.
- **Data Structures Problem Solving Workshop** — LDRP-ITR, Gandhinagar | Sep 2023
